PROFESSIONAL SUMMARY

Flutter Developer with 1 year of professional experience building feature-rich, scalable mobile applications. Currently working as a Software Engineer at BrewsZilla, contributing across Flutter, Hasura GraphQL, Keycloak Authentication, and REST API integrations.Previously developed 5+ real-world projects using React.js, enabling strong expertise in component-based UI development, state management, and frontend architecture. Skilled in performance optimization and delivering production-ready applications for both internal and client platforms.

SKILLS

Front end: React,Flutter,HTMl,CSS
Progarmming langugae: Javascript
APIs & Backend: REST APIs, GraphQL, Hasura, Node.js, Express.js
Databases: MongoDB
Authentication: Keycloak, JWT Auth, Role Based Access Control
Tools: Git, Postman,bruno, Android Studio, VS Code, Draw.io

WORK EXPERIENCE

Software Engineer — Flutter Developer

BrewsZilla Technologies, Bengaluru Nov 2024 – Present

- Developed and maintained production-ready Flutter applications for internal and client-based.
- Implemented scalable UI screens using custom widgets, responsive layouts, and design guidelines.
- Integrated REST APIs, Keycloak Authentication.
- Worked with Provider and Bloc state-management for modular and maintainable code.
- Implemented business featureslike outlet listing, reviews, filters, maps, login flows.
- Closely collaborated with backend and design teams, using Postman, Git.

EDUCATION

K S R INSITUTE FOR ENGINEERING AND TECHNOLOGY
Bachelor Of Engineer in Computer Science

PROJECTS

1. Cocoa Management Information System (CMIS App)

- Built a single-admin system to manage farmer and farmer-group records
- Implemented offline-first architecture using SQLite
- Developed auto-sync to push offline data to PostgreSQL when online
- Ensured zero duplication with post-sync data cleanup
- Eliminated dependency on continuous internet (web version limitation)
- Supported dual workflows:
- Online → Main Database
- Offline → SQLite → Sync → Main Database
- Tech Stack: Flutter, Dart, SQLite, PostgreSQL, REST APIs, JWT Authentication

2. BrewsZilla Mobile App& CMS — Ongoing Project

- Built a social platform for brews discovery, meetups, and event-based engagement
- Each event will be created through cms for outlets and Maintained through internal system
- Developed profile & settings modules: user info, history, phone update flow, Contact Us, Feedback, About Us
- Implemented meetups system with multi-step forms, preference-based grouping, and auto outlet assignment
- Connected backend using Hasura GraphQL (queries, mutations, subscriptions) with Keycloak-secured routes
- Tech Stack: React, Flutter, PostgreSQL, Hasura GraphQL, Meilisearch, Keycloak, REST APIs

3. Email Automation Platform – Flutter & Node.js

- Built end-to-end flow for uploading Excel/CSV contact lists, creating campaigns, and sending bulk emails from mobile to a Node.js/Express backend with MongoDB.
- Integrated Resend email API with a verified custom domain (hub29.online), including HTML/text rendering, reply-to routing to each user's own email, and rate-limit handling for reliable bulk sends.
- Added robust server-side file handling using Multer and XLSX for validating and parsing large recipient lists, with error handling and safe clean-up of processed drafts.
- Tech Stack: Flutter, Dart, Node.js, Express.js, MongoDB, Resend Email API, JWT Auth, Multer, XLSX, REST APIs
